

Concerns: Radiographic evaluation

Patient:

Name	Elaritz Z	Date of birth	01/02/2022
Breed	Zangersheide	Identification	276020000826960
Gender	M	Passport	276421000003022

Radiographical examination performed 14/07/2025 by Dr. F. Mijten (views):

- Front feet: LM, DPr-PaDiO
- Hocks: LM, DP, DL-PIMO and DM-PILO
- Stifles: LM, caud-cran
- Hind + front fetlocks: LM, DP, DL-PIMO and DM-PILO

Radiographical findings:

- LF foot: enlarged synovial invagination at the level of the central aspect of the distal border of the navicular bone.
- RF foot: No significant bony abnormalities radiographically visible.
- L hock: No significant bony abnormalities radiographically visible.
- R hock: No significant bony abnormalities radiographically visible.
- L stifle: No significant bony abnormalities radiographically visible.
- R stifle: Mineralization medial aspect proximal tibia.
- LH fetlock: plantar osteochondral fragment medial P1.
- RH fetlock: small focal region of reduced bone density sagittal groove of P1 and opposing flattening of the sagittal ridge of P2.
- LF fetlock: No significant bony abnormalities radiographically visible.
- RF fetlock: No significant bony abnormalities radiographically visible.

Yours sincerely,

Filip Vandenberghe
